Configurando o envio de emails (Rails)

Mailgun-Ruby

https://github.com/mailgun/mailgun-ruby

Gem Mailgun-Ruby

```
group :production do
  gem 'mailgun-ruby', '~>1.1.4'
end

                bundle
```

config/secrets.yml (Server)

```
production:
    MAILGUN_SECRET_API_KEY: asdfasdfasdfasdf
```

Crie o arquivo mailgun.rb

config/initializers/mailgun.rb

mailgun.rb

```ruby
Mailgun.configure do |config|
  config.api_key = Rails.application.secrets.MAILGUN_SECRET...
end
```

config/environments/ production.rb

```ruby
# Devise Config
config.action_mailer.default_url_options =
        { host: 'escamboapp.com.br' }
```

config/environments/ production.rb

```ruby
# Mailgun Config
config.action_mailer.delivery_method = :mailgun
config.action_mailer.mailgun_settings = {
  api_key: Rails.application.secrets.MAILGUN_SECRET...,
  domain: 'mg.escamboapp.com.br',
}
```

Faça um novo deploy

```
git add .
git commit -m "Configurando o envio emails"
git push origin master

bundle exec cap production deploy
```

Teste a aplicação!
